

## MAKING A DIFFERENCE

As North America's population grows exponentially, it's reassuring to know the cornerstone of Hanson Building Products' strategy is sustainable development. The world's largest manufacturer of heavy building products for the construction industry, Hanson Building Products helps communities grow and thrive responsibly. Within our expansive range of companies, Hanson Building Products is now and has always been a smart choice for the environment:

- Hanson Pipe & Precast
- Hanson Pressure Pipe
- Hanson Brick
- Hanson Roof Tile
- Hanson Hardscapes
- Hanson Structural Precast

### LASTING RELEVANCE

With a history dating back to the Roman Empire, concrete is a proven, viable, lasting building material. Due to its 100-year-plus life span, concrete is one of the most energy efficient and eco-friendly building products. This means that all of Hanson's concrete and brick products essentially have no life cycle end – not only do they last up to three times longer than other products when serving their original purpose, but they can also be recycled and repurposed indefinitely. Thus, replacement products using depleting resources are needed far less frequently. There's practically no waste, and contribution to landfills is dramatically reduced.

### EARTH FRIENDLY

Made of primarily local, natural, non-toxic elements from the earth – sand, gravel, crushed stone or clay – Hanson's concrete structures and clay brick are not flammable, will not react with other materials and do not release chemicals into their surroundings.

### FORWARD THINKING

Hanson Building Products, including the products we manufacture, has a history of inherent sustainability. Even so, our eye is always on the future through our people and manufacturing practices today. When you use Hanson Building Products, you can feel confident you're making a long-term investment in the environment.
